

Diabetes Risk Medical Report

Smart Medical Screening System

Generated: 05-05-2026 12:07 PM
Report Type: Machine Learning Based Diabetes Risk Screening

Patient Name	fggh
Contact Number	03577789
Prediction	No Diabetes Risk Detected
Risk Level	Low Risk
Diabetes Probability	36.4%
Doctor Recommendation	Maintain healthy habits and continue routine checkups.

Patient Input Data

Attribute	Value
Pregnancies	0
Glucose	200.0
BloodPressure	120.0
SkinThickness	97.0
Insulin	500.0
BMI	20.0
DiabetesPedigreeFunction	2.0
Age	20

Simple Explanation

The model compares the patient's medical attributes with previous patient records. Higher glucose, BMI, age, insulin, and family-history score can increase diabetes risk. This is a screening result, not a final medical diagnosis.

Lifestyle Recommendations

- Reduce salt and added sugar intake.
- Exercise at least 30 minutes daily.
- Schedule a medical checkup.
- Maintain a balanced diet with vegetables, whole grains, and lean protein.

- Monitor glucose level regularly if symptoms or family history exist.

Note: This system is for educational screening support only. A qualified doctor should confirm any diagnosis.
